Project 1 - Artistic Drawing Using Turtle

Objectives

1. Able to write clean code utilizing functions and loops to avoid unnecessary repetition.
2. Draw a beautiful artistic picture using Python turtle.
3. Upload the source code and the drawing image to GitHub and document the project on GitHub.

Project Overview

In this project, you will create an artistic picture using Python turtle, **any beautiful picture you want to draw** such as a mandala, a game interface, your dream house, mountain view, seaside, a park, etc.

For this project, you may utilize what you've learnt during the course and get inspired by all the tools around you to create **an original drawing**. Note: the drawing from each student/group should be your original work, and you should be able to explain your code well to others such as your peers, your instructor, your future employers, etc.

Part 1 – Be the artist!

Create your own original artistic drawing using Python turtle (just for your reference, your instructor designed a simple drawing attached below using what we have learned in the class. You can do better). Although writing code on VS Code is recommended because it is stable and has good drawing quality, feel free to use any other IDE such as PyCharm, etc.

Part 2 – Show your work to the world!

After finishing drawing, go to your GitHub (if you don't have a GitHub account, you can follow this doc to create one), create a new public repository named **comp115_project1**, upload your drawing source code to this repository, upload your drawing as well (can be a Screenshot of your drawing), and well document your project on GitHub by writing a good README.md file. And here is a simple example of project 1.

Marking (100 marks in total)

• Your beautiful picture drawing using Python turtle (50 marks)

• Upload your drawing project: neat source code (20 marks) + drawing screenshot (10 marks) on your GitHub account, document your project on GitHub README.md file (10 marks), and copy and paste your GitHub project 1's repo link on e-learn for submission (10 marks).
